Part I

Basic Syntax

Minorian is a mostly head-final language. Its default word order is Subject-Object-Indirect Object-Verb (SO(IV)); however, due to its highly inflectional nature, constituents can often go through scrambling and extraposition. The language's head-finality extends all the way to the sentence level, where clauses are organized in a head-final manner amongst themselves. The basic, default syntax goes as follows:

- Adjective - Noun
- Noun - Postposition
- Possessor - Possessed
- Main Verb - Auxiliary Verb
- Adverb - Verb

Part II

Declensions

Nouns in Minorian inflect for seven cases: Nominative, Accusative, Genitive, Dative, Instrumental, Allative, and Ablative. They also are split into three genders: Masculine, Feminine, and Neuter. Most nouns can inflect for two numbers: the Singular and the Plural; however, some nouns, particularly those that are often seen in groups (children, animals, trees, plants) lost their Singular forms and instead have a distinct Singulative form. These are the Singulative-Collective nouns. The singulative and collective do not function as separate numbers (they function as the singular and plural, respectively); they just compose a separate paradigm where the plural (collective) is the base form and the singular (singulative) requires a suffix to form.

Uses of the Cases

Nominative

This case is used for the subjects of most verbs. Some verbs do use other cases for their subjects though.

Accusative

This case is used for the direct objects of most verbs. Some verbs use other cases for their DOs though. This case is also used with a select few postpositions that deal with location.

Genitive

This case is used for possession. This case also marks familial relationships (e.g. my brother, &c.), partitions of sets (e.g. two of the men), and special relations (e.g. the man of the house). Basically used where English uses the preposition "of".

Dative

This is the default postpositional case. This case is usually used as a locative, relational, or temporal case. It is used when the postposition in question does not describe: a method of performing (Instrumental), motion towards something or intent (Allative), or motion away from something (Ablative). This case is used as the subject of some verbs, namely mental verbs. It shares this role as a quirky subject marker with the Allative case.

Instrumental

This case is used for marking the tools or methods through which an action is performed. It also is used as a durational case (e.g. He worked for three days). It can occasionally fill the role as direct object of some verbs (to love, to like, to want, to need &c.), but the Allative case is most often used in those scenarios.

Allative

This case primarily marks location towards whatever it is marking (e.g. to the store) and intent or purpose (for someone). It can also be used with some verbs to mark the subject, a property it shares with the Dative case. It can also mark the direct objects of some verbs (to love, to like, to want, &c.), a property it shares with the Instrumental.

Ablative

This case marks motion away from something or that something originates from somewhere (e.g. He moved away from England; This letter is from Shelly).

Consonant and Vowel Mutation

Minorian inflected forms can often go through sound mutation. Certain inflections will be able to trigger these mutations depending on the length and stem of a noun. The mutations that may happen go as follows:

Vowel Mutation

- **I-Mutation**

- In syllables that are in position to i-mutate, back vowels can become an equivalent-height front vowel before ⟨ny⟩ or before a syllable that contains ⟨i⟩, ⟨ii⟩, or ⟨j⟩.

- **Long E Lowering**

- In syllables that are in position to do so, ⟨ee⟩ may lower to ⟨ê⟩

- **Mid-Height Vowel Backing**

- In syllables that are in position to do so, ⟨ee⟩ and ⟨ê⟩ may backen to ⟨aa⟩ when occurring before ⟨w⟩ or ⟨m⟩ and to ⟨o⟩ when occurring before ⟨k⟩, ⟨g⟩, ⟨x⟩, ⟨q⟩, ⟨qg⟩, ⟨qh⟩, or ⟨nq⟩

- **Round Diphthong Smoothing**

- In syllables that are in position to do so, ⟨eo⟩ and ⟨eeo⟩ may become ⟨i⟩ and ⟨ii⟩, respectively, when occurring ⟨b⟩, ⟨p⟩, ⟨m⟩, ⟨hm⟩, ⟨f⟩.

- **Tense Diphthong Smoothing**

- ⟨oi⟩ may smooth to ⟨ô⟩ before coda ⟨r⟩; and in syllables that are in position to do so, ⟨oi⟩ may smooth to ⟨o⟩.

- **Tense O Breaking**

- In syllables that are in position to do so, ⟨ô⟩ may break to ⟨aa⟩ after ⟨w⟩, ⟨r⟩, ⟨l⟩, ⟨b⟩, ⟨p⟩, ⟨m⟩, ⟨hr⟩, or ⟨hl⟩, and after ⟨n⟩, ⟨hn⟩, ⟨ny⟩, or ⟨hny⟩ if those consonants are not directly preceded by a vowel; among other consonants, it may break to ⟨wa⟩.

Consonant Mutation

After vowel mutations are applied (as some mutations affect the consonant mutations), the consonant mutations are applied, of which there is only one:

- **K Palatalization**

- In syllables that are in position to do so, ⟨k⟩ may palatalize to ⟨ch⟩ if coming before ⟨i⟩, ⟨ii⟩, ⟨e⟩, ⟨ee⟩, ⟨ê⟩, ⟨eo⟩, ⟨eeo⟩, ⟨ü⟩, or ⟨üu⟩. The consonant cluster ⟨sk⟩ may also palatalize to ⟨sh⟩ in the same syllables, except that this mutation does not have the front-vowel restriction like the previous one.

A Note on Declension Paradigms

For each regularly declining stem, there are three declension paradigms: Monosyllabic, Disyllabic, and Trisyllabic. These paradigms only differ from each other by what mutations they trigger and where they are triggered. Since root words longer than three syllables are not that common, their declensions were lost and merged with the trisyllabic declensions, in which the mutations will only affect the last three syllables of the root. In compound words, only the second root gets affected by the mutations; throughout all inflections, the first root will remain the same.

Chapter 1

Nouns

Masculine Nouns

Back Stems

Back-stemmed nouns are nouns that end with ⟨a⟩, ⟨aa⟩, ⟨ã⟩, ⟨ãa⟩ ⟨o⟩, ⟨ô⟩, ⟨oi⟩, ⟨u⟩, or ⟨uu⟩ in their Nominative singular forms, for the most part. Some back-stemmed nouns are Collective-Singulative nouns (which all end in ⟨-no⟩ in the Nominative collective) and thus decline differently than the Singular-Plural nouns. And some back-stemmed nouns end in consonants or ⟨i⟩ due to word-final high vowel apocope of ⟨u⟩; this ⟨u⟩ reappears in their declensions though.

Declensions of Monosyllabic Nouns

Note that some of these endings may be reduced in unstressed syllables.

Capital V represents the stem vowel.

Superscript numerals indicate on which syllable a mutation occurs on.

F-Stems

F-stemmed nouns are nouns that end in ⟨f⟩ in their nominative singular forms. Some nouns look like f-stems are not actually f-stems due to high-vowel apocope removing the final ⟨i⟩s and ⟨u⟩s from i-stems and u-stems, respectively. The base forms of collective f-stemmed nouns end in ⟨foo⟩.

Stopped Nasal Stems

Stopped-nasal-stemmed nouns are nouns that end in ⟨ng⟩, ⟨ngk⟩, ⟨nC⟩, or ⟨nC⟩ (where ⟨C⟩ represents any phonotactically allowed plosive). Some nouns that look like Stopped Nasal stems are actually ⟨i⟩ or ⟨u⟩-stems because of (say it with me now) word-final high vowel apocope.

Declensions of Monosyllabic Words

*Note that Capital N represents the stem nasal;
Capital C represents the stem plosive;
Superscript numerals indicate on which syllable a mutation occurs*

NY-Stems

NY-stemmed nouns are nouns that end in ⟨ny⟩ in the Nominative Singular or in ⟨nyênê⟩ in the Nominative Collective. As with all the other consonant stems, some words that look like ny-stems are actually i-stems or u-stems because of word-final high vowel apocope.

Neuter Nouns

Now the previous section displayed that there are quite a (relatively) large number of stems that fall under the Masculine noun class. This is not the case for the Neuter and Feminine classes which only have one class of consonant stems each. This is because ~~I'm lazy as shit~~ the Masculine nouns were originally all ô-stems in *those ancient days*, and over the æons, those rounded vowels were prone to apocope following labial consonants, creating the f-stems, and after consonant clusters, creating the stopped-nasal stems. Being a back vowel, it was also prone to i-mutation, creating the ny-stems.

E-Type Stems

The e-type stems are a collection of nouns that end in e-like sounds, those being: ⟨e⟩, ⟨ee⟩, ⟨ê⟩, ⟨eo⟩, and ⟨eoo⟩. This collection of stems are not actually affected by high vowel apocope, so one can be sure that any noun that ends in these vowels is infact a neuter noun.

Declensions of Monosyllabic Nouns

*Note that some of these endings may be reduced in unstressed syllables.
V represents the stem vowel*

Stopped Lateral Stems

The stopped lateral stems are a group of nouns that end in ⟨lk⟩, ⟨lg⟩, ⟨lq⟩, and ⟨lqq⟩ in the Nominative Singular. As with most of the consonant stems, some nouns that look like they belong to this group don't because of *word-final high vowel apocope*. These stems arose due to the backening effect of the velar consonants on the following e-type vowel (as these were originally e-type stems), causing back gradation.

Declensions of Monosyllabic Nouns

Note that some of these endings may reduce in unstressed syllables.

Capital C represents the stem consonant.

Feminine Nouns

I-Type Stems

The i-type-stemmed nouns are a group of nouns that end in ⟨i⟩, ⟨ii⟩, and ⟨ae⟩ (this one was probably a result of long-vowel breaking somewhere in the past) in the Nominative Singular. Some i-stems look like consonant stems due to high-vowel apocope, and some u-stems look like i-stems by the same process (e.g. syllables like ⟨tju⟩ becoming ⟨ti⟩) and vice-versa.

Declensions of Monosyllabic Nouns

Note that some of these endings may reduce in unstressed syllables.

Capital V represents the stem vowel.

**Vowel only lengthens if there is a lengthened version available (e.g. no iiii or aeae)*

R-Stems

The r-stemmed nouns are kind of special. They do not decline for number at all, since ~~I'm so fuck-~~
~~ing tired of making declension tables~~ their plurals merged with their singulars sometime during Old
Minorian before the Singulative case developed. Even though they don't inflect for number, adjectives
that modify them and verbs that take them as subjects do inflect for the intended number.

Declensions of Monosyllabic Nouns

Irregular Nouns

There are 22 base irregular nouns (of course these can compound with other nouns to create a possibly infinite amount of irregular nouns). This group is composed of the 10 z-stem nouns (whose genders vary): ⟨phnist⟩ (child), ⟨taaz⟩ (mother), ⟨plaaaz⟩ (father), ⟨qgwäs⟩ (brother), ⟨qhøs⟩ (sister), ⟨füs⟩ (man), ⟨hniis⟩ (woman), ⟨dlös⟩ (person), ⟨prāz⟩ (nation), and ⟨xabäs⟩ (army) and composed of the 12 p-stem nouns (all of which are neuter): ⟨āap⟩ (farm), ⟨op⟩ (food), ⟨knopst⟩ (cloth/clothing), ⟨sprup⟩ (road), ⟨miip⟩ (house/dwelling), ⟨chiipst⟩ (hand), ⟨dweipst⟩ (eye), ⟨puip⟩ (head), ⟨hmiiipst⟩ (tree), ⟨hniipst⟩ (pet), ⟨peipst⟩ (thing), and ⟨swidiip⟩ (place). The declensions for these nouns will be in a separate document to prevent this one from getting longer than it needs to be.

Chapter 2

Pronouns

Personal Pronouns

The personal pronouns functioned pretty much like nouns (except for the normal pronoun business where they can't take modifiers and the like), with one extra quirk: they decline for the dual number. When there is exactly two of something as the referent of the pronoun, it takes the dual number. Nouns used to be able to take the dual, but that has since been lost. The singular genitive pronouns may also decline as adjectives.

			Nominative	Accusative	Dative	Genitive	Instrumental	Allative	Ablative
Singular	1st Person		<i>tuud</i>	<i>tuup</i>	<i>tabäst</i>	<i>twaam</i>	<i>tonāz</i>	<i>top</i>	<i>twalā</i>
	2nd Person		<i>qhu</i>	<i>qhup</i>	<i>qhafst</i>	<i>qhwim</i>	<i>qhonāz</i>	<i>qhop</i>	<i>qhawā</i>
	3rd Person	Masc.	<i>stā</i>	<i>stāp</i>	<i>stāst</i>	<i>stam</i>	<i>stāaz</i>	<i>stop</i>	<i>stāal</i>
		Neut.	<i>stê</i>	<i>stêp</i>	<i>steeost</i>	<i>steeom</i>	<i>stêz</i>	<i>steeop</i>	<i>stiilā</i>
		Fem.	<i>sti</i>	<i>stip</i>	<i>steest</i>		<i>stiniz</i>	<i>stiiþ</i>	<i>steon</i>
Dual	1st Person		<i>tonnōz</i>	<i>tonnōs</i>	<i>tannāfst</i>	<i>tannāfs</i>	<i>tannāz</i>	<i>tonnōs</i>	<i>tollōfs</i>
	2nd Person		<i>qhunōz</i>	<i>qhunōs</i>	<i>qhunāfst</i>	<i>qhunāz</i>	<i>qhunāaz</i>	<i>qhunnōs</i>	<i>qhullāfs</i>
	3rd Person	Masc.	<i>stanōz</i>	<i>stanōs</i>	<i>stanāfst</i>	<i>stāaz</i>		<i>ston</i>	<i>stofs</i>
		Neut.	<i>stêz</i>	<i>stêp</i>	<i>steeost</i>	<i>steeos</i>	<i>stabāz</i>	<i>stabās</i>	<i>stalāfs</i>
		Fem.	<i>stiniz</i>	<i>stiniis</i>	<i>stineest</i>	<i>stiim</i>	<i>stiniz</i>	<i>stiniip</i>	<i>steon</i>
Plural	1st Person		<i>ton</i>	<i>top</i>	<i>tost</i>	<i>tuun</i>	<i>twaaz</i>	<i>twaap</i>	<i>tabnā</i>
	2nd Person		<i>qhon</i>	<i>qhop</i>	<i>qhost</i>	<i>qhon</i>	<i>qhāaz</i>	<i>qhop</i>	<i>qhonāfst</i>
	3rd Person	Masc.	<i>ston</i>	<i>stop</i>	<i>stost</i>	<i>stom</i>	<i>stāaz</i>	<i>stop</i>	<i>stonāba</i>
		Neut.	<i>steen</i>	<i>steep</i>	<i>steeost</i>	<i>steeom</i>	<i>stafs</i>	<i>steeop</i>	<i>stabāz</i>
		Fem.	<i>stoz</i>	<i>steez</i>	<i>stost</i>	<i>stiin</i>	<i>stanābaz</i>	<i>stop</i>	<i>steeon</i>

Impersonal Pronouns

Minorian has two impersonal pronouns: one for semantically animate nouns, ⟨hniir⟩, and one for semantically inanimate nouns, ⟨driim⟩. These are indeclinable, which usually forces the clause they're in to SOV. They're usually only used to emphasize themselves (i.e. not putting the sentence into a specific voice, like causative or passive, to emphasize the part the impersonal pronouns play).

Interrogative Pronouns

Minorian has two interrogative pronouns: one for semantically animate or grammatically common nouns, ⟨dô⟩, and one for semantically inanimate or grammatically neuter nouns, ⟨dii⟩. Both of the interrogative pronouns decline. These also functioned as the word for *which*, so if one needed to specify that they were asking for one of several things, it would be roughly phrased as *what of these*, (e.g. ⟨hlönim dii⟩). There are also seven other interrogative words; they aren't technically pronouns but will be in this section anyway so that there aren't two interrogative sections in this document.

Pronoun	Nominative	Accusative	Dative	Genitive	Instrumental	Allative	Ablative
dô	<i>dô</i>	<i>döp</i>	<i>deeost</i>	<i>deem</i>	<i>dozin</i>	<i>deeop</i>	<i>dôleo</i>
dii	<i>dii</i>	<i>diip</i>	<i>deest</i>	<i>dim</i>	<i>daez</i>	<i>deep</i>	<i>duun</i>

English Equivalent	Minorian Adverb
when	<i>dweeomst</i>
where	<i>düzwit</i>
whither	<i>düzwiþ</i>
whence	<i>düzweo</i>
why	<i>dwālör</i>
how	<i>diiriiþ</i>
how much	<i>streeost</i>

While both the Allative and Ablative forms of the interrogative pronouns can technically function as *whither* and *whence*, respectively, they are only used when the location is a being or object and not for when the location is mostly regarded as a place you can be at (e.g. compare *What did he go towards?* and *Whither did he go?*).

Chapter 3

Adjectives

All adjectives have to agree with and precede the nouns they modify in both case and number. Masculine adjectives decline as regular o-stems, feminine ones decline as regular i-stems, and neuter ones decline as regular e-stems. The declined adjective by itself can function as a prop-word (e.g. ⟨pnaap⟩ can mean both strong and the strong one) Each adjective has both comparative and superlative forms. The comparative form is created by the prefix ⟨stri(n)-⟩, and the superlative is formed by duplicating the first syllable of the adjective; if this results in a disallowed cluster, then an epenthetic schwa is added; if it results in hiatus, an epenthetic /n/ is inserted. The adverbial form of an adjective is the uninflected form of the adjective, which is usually put before the verb except for emphasis. All adjectives decline completely regularly; however, there are four adjectives whose comparative, superlative, and adverbial forms are irregular. The comparative and superlative forms of these adjectives adverbialize regularly though.

English Equivalent	Adjective	Comparative	Superlative	Adverb
good	lor	<i>strongk</i>	<i>eströngk</i>	<i>kriis</i>
bad	qhun	<i>qwani</i>	<i>qhort</i>	<i>qwin</i>
big	korn	<i>shorn</i>	<i>korin</i>	<i>kniwă</i>
small	jiihr	<i>chiin</i>	<i>eechin</i>	<i>krimp</i>

Chapter 4

Determiners

Demonstratives

Minorian has three demonstratives: ⟨hlon⟩ (this), ⟨hlae⟩ (that), and ⟨hlāa⟩ (yonder) that each decline for number and case. The medial demonstrative may also function as the word for “the”.

Declensions of the Proximal Demonstrative

		Nominative	Accusative	Dative	Genitive	Instrumental	Allative	Ablative
Singular	Masculine	<i>hlon</i>	<i>hlont</i>	<i>hlafst</i>	<i>hlonim</i>	<i>hlāaz</i>	<i>hloþ</i>	<i>hlaal</i>
	Neuter	<i>hlonă</i>	<i>hlont</i>	<i>hlonöþ</i>	<i>hløm</i>	<i>hløz</i>	<i>hleont</i>	<i>hleeo</i>
	Feminine	<i>hløn</i>	<i>hløþ</i>	<i>hleoneest</i>	<i>hløm</i>	<i>hloiz</i>	<i>hløþ</i>	<i>hleeon</i>
Plural	Masculine	<i>hlôngk</i>	<i>hlôngk</i>	<i>hlungköst</i>	<i>hlô</i>	<i>hlaam</i>	<i>hlônt</i>	<i>hlāaf</i>
	Neuter	<i>hlön</i>	<i>hlöþ</i>	<i>hleeonist</i>	<i>hlönim</i>	<i>hlabāz</i>	<i>hleeoþ</i>	<i>hlabāz</i>
	Feminine	<i>hlorb</i>	<i>hlörin</i>	<i>hlörist</i>	<i>hlöm</i>	<i>hlöriz</i>	<i>hlöriþ</i>	<i>hloreen</i>

Declensions of the Medial Demonstrative

		Nominative	Accusative	Dative	Genitive	Instrumental	Allative	Ablative
Singular	Masculine	<i>hlaa</i>	<i>hlāaþ</i>	<i>hlaast</i>	<i>hlaam</i>	<i>hlāaz</i>	<i>hloþ</i>	<i>hlael</i>
	Neuter	<i>hlae</i>	<i>hlaeþ</i>	<i>hleost</i>	<i>hleem</i>	<i>hlaez</i>	<i>hleoþ</i>	<i>hlael</i>
	Feminine		<i>hliþ</i>	<i>hleest</i>	<i>hliim</i>		<i>hleeþ</i>	<i>hleon</i>
Plural	Masculine	<i>hlaenă</i>	<i>hlaeniþ</i>	<i>hlaeneost</i>	<i>hlaenim</i>	<i>hleez</i>	<i>hlaeniþ</i>	<i>hleneoz</i>
	Neuter	<i>hlae</i>	<i>hlaeþ</i>	<i>hlaneost</i>	<i>hlaem</i>	<i>hlaefst</i>	<i>hlaent</i>	<i>hlaefst</i>
	Feminine	<i>hlaer</i>	<i>hlaeris</i>	<i>hlaerist</i>	<i>hlaerim</i>	<i>hlaerāz</i>	<i>hlaerip</i>	<i>hlaerān</i>

Declensions of the Distal Demonstrative

		Nominative	Accusative	Dative	Genitive	Instrumental	Allative	Ablative
Singular	Masculine	<i>hläa</i>	<i>hlääp</i>	<i>hlaest</i>	<i>hläam</i>	<i>hlääz</i>	<i>hləp</i>	<i>hlälä</i>
	Neuter	<i>hlê</i>	<i>hlêp</i>	<i>hliist</i>	<i>hliimst</i>	<i>hläfs</i>	<i>hliipst</i>	<i>hläfst</i>
	Feminine	<i>hlii</i>	<i>hliip</i>			<i>hliiz</i>	<i>hlêp</i>	<i>hliin</i>
Plural	Masculine	<i>hlää</i>	<i>hlääp</i>	<i>hlêst</i>	<i>hläa</i>	<i>hlääz</i>	<i>hlənt</i>	<i>hläbä</i>
	Neuter	<i>hlê</i>	<i>hlêp</i>	<i>hliist</i>	<i>hliimst</i>	<i>hläbäz</i>	<i>hliipst</i>	<i>hläbäd</i>
	Feminine	<i>hliis</i>	<i>hliis</i>		<i>hliinim</i>	<i>hlaeniz</i>	<i>hliip</i>	<i>hliin</i>

Numerals

Minorian uses a base-12 number system. This means that there are twelve digits, which most systems write as: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, X, A (Minorian has its own set of digits). Just like how in English we build numbers by saying 100s, 10s, and 1s (such as in the number 491, e.g. 4 hundreds, 9 tens, and 1 one), Minorian builds numbers in 144s, 12s, and 1s. That same number, 491, in base-12 would be 34A (3 groups of 144, 4 groups of 12, and 11 groups of 1). All cardinal numbers (those depicting quantity) are indeclinable. The number one, however, can be treated as declinable when used to mean *only*. All cardinal numbers greater than 12 govern the genitive case no matter the context. The ordinal and multitudinal numbers behave perfectly regularly though.

Numbers

Value	Cardinal	Ordinal	Multitudinal
0	<i>träamjä</i>	<i>träamjäriim</i>	<i>träamjäzä</i>
1	<i>stê</i>	<i>stênt</i>	<i>staam</i>
2	<i>hnêlz</i>	<i>hnêlt</i>	<i>hnêls</i>
3	<i>spo</i>	<i>speeont</i>	<i>spreem</i>
4	<i>wam</i>	<i>wamiim</i>	<i>wamê</i>
5	<i>speo</i>	<i>speoriim</i>	<i>speozê</i>
6	<i>pen</i>	<i>peniim</i>	<i>penê</i>
7	<i>hluurp</i>	<i>hluurpiim</i>	<i>hluurpê</i>
8	<i>sfrii</i>	<i>sfriiriim</i>	<i>sfriizê</i>
9	<i>mi</i>	<i>miriim</i>	<i>mizê</i>
10	<i>lix</i>	<i>lixiim</i>	<i>lixê</i>
11	<i>wo</i>	<i>woriim</i>	<i>wozê</i>

12	<i>spuls</i>	<i>spulsiim</i>	<i>spulsē</i>
12+1	<i>stê xet spuls</i>	<i>stênt xet spulsiim</i>	<i>staam xet spulsē</i>
2*12+1	<i>stê xet hnêlz spuls</i>	<i>stênt xet hnêlz spulsiim</i>	<i>staam xet hnêlz spulsē</i>
12 ²	<i>pno</i>	<i>pnoriim</i>	<i>pnozē</i>
12 ² +2*12+1	<i>pno xet stê xet hnêlz spuls</i>	<i>pnoriim xet stênt xet hnêlz spulsiim</i>	<i>pnozē xet staam xet hnêlz spulsē</i>
12 ³	<i>stêntōn</i>	<i>stêntōniim</i>	<i>stêntōnã</i>
12 ⁴	<i>hnêltōn</i>	<i>hnêltōniim</i>	<i>hnêltōnã</i>

A Note on Definite and Indefinite Noun Phrases

Minorian distinguishes between definite and indefinite noun phrases. All, and I mean All, definite noun phrases must have some kind of determiner (such as this, that, my, &c.); this includes proper nouns and names. So one wouldn't say ⟨Bob⟩ to refer to a person named Bob; they would instead say ⟨hlaa Bob⟩ (the Bob), and ⟨hlaa⟩ would be inflected appropriate of course. Any phrase without a definite determiner would be considered indefinite. Note that Minorian does Not have an indefinite article. The numeral ⟨stê⟩ (one) does not function as one either; it strictly functions as the numeral *one* or the adjective/adverb *only*. Where English would use an indefinite article, Minorian would use a null determiner.

Part III

Verbs

Chapter 5

Verb Conjugations

Minorian verbs are highly inflectional. They conjugate for three persons, two numbers, two tenses (Past and Non-Past), three aspects (Imperfective, Perfective, and Habitual), five moods (Indicative, Imperative, Subjunctive, Hortative, and Abilitative), and four voices (Active, Passive, Mediopassive, and Causative).

Quirks of the System Note that the past conjugations of the imperative and hortative are emphatic. It comes from phrases like "I need it done yesterday!" to show that something must be done this instant or that it is desperately needed. The present perfective does not really mean present perfective (does that even make sense?), it is instead used as a gnomic. The two infinitives does not refer to the time-periods in which the verb is performed; they are used for different scenarios unrelated to timeframe. The only reason they are classified into Past and Non-Past is because the Past infinitive was formed from an old resultative form which also came to be used as the Past form.

Strong Verbs

The strong verbs are a class of verbs whose conjugations are simple suffixes. Most of them are derived from nouns, though some have been converted from old weak verbs. They are called strong because they have more conjugations than the weak verbs, whose conjugations had begun collapsing when the strong verbs were emerging as a class.

Active Conjugations

Note that some of these might be reduced in unstressed syllables

Infinitive							
-(o)nyor ¹				-(o)nyok ¹			
Indicative							
		Non-Past			Past		
		Imp.	Perf.	Hab.	Imp.	Perf.	Hab.
Singular	1st Person	-strafk	-nud	-buu	-krāst	-nafk	-nuungk

Plural		-hleeon	-hleeohr			
Abilitative						
		Non-Past		Past		
Singular		-puuqh		-hnunt		
Plural		-puus				

¹The epenthetic vowel is present in the other conjugations as well.

Weak Verbs

The weak verbs are an older class of verbs. Each verb in the class has a stem form ending in a vowel. Their conjugations dramatically simplified over the æons; and they also don't have a distinct abilitative inflection, instead relying on the auxiliary verbs: ⟨qhar⟩ (can; to be physically able to), ⟨sprar⟩ (can; to know how to), and ⟨plif⟩ (may; to be allowed to). These verbs also feature everyone's feature of the Germanic languages: umlaut. Umlaut occurs on the syllable preceding the inflection shown in the

table. There are two types of umlaut a syllable can go through: Front Gradation and Back Gradation. Front Gradation causes a back vowel to mutate to its corresponding front vowel (with roundedness preserved). If a front vowel goes through front gradation, it raises to the nearest vowel with the same Phonemic length, unless the vowel in question is ⟨i⟩ or ⟨ii⟩, in which case it mutates to ⟨oi⟩. Back Gradation causes a front vowel to mutate to its corresponding back vowel (Without preserving roundedness). If the mutating vowel is a back vowel, then it lowers to the nearest vowel that has the same Phonemic length, unless the vowel in question is ⟨a⟩, ⟨aa⟩, ⟨ǣ⟩, or ⟨ǣa⟩, in which case it mutates to ⟨ae⟩.

Active Conjugations

Irregular Verbs

Minorian has 27 base irregular verbs (modifiers can of course be attached to these to create more irregular verbs). To keep this document from being 500 pages long, the inflections of these verbs will be in a different document. They are: ⟨pāar⟩ (to be), ⟨tur⟩ (to do), ⟨leo⟩ (to go), ⟨sjeor⟩ (to want), ⟨frôr⟩ (to dare), ⟨plir⟩ (to allow), ⟨qgaer⟩ (to be good at), ⟨fjiimir⟩ (to arrive), ⟨drir⟩ (to look), ⟨driqhir⟩ (to see), ⟨snāar⟩ (to sniff), ⟨snāāfir⟩ (to smell), ⟨lor⟩ (to listen), ⟨løfir⟩ (to hear), ⟨þor⟩ (to touch), ⟨þøfir⟩ (to feel physically), ⟨slor⟩ (to think; to have thoughts), ⟨ôpāar⟩ (to become), ⟨qhar⟩ (can; to know how to), ⟨sprar⟩ (can; to be physically able to), ⟨spir⟩ (might; have the possibility to), ⟨qguur⟩ (shall)

Chapter 6

Usage of the Verb Constructions

Auxilliary Verbs

Minorian has nine auxilliary verbs: ⟨qhar⟩ (can; to know how to), ⟨sprar⟩ (can; to be physically able to), ⟨spir⟩ (might; have the possibility to), ⟨qguur⟩ (shall), ⟨sjeor⟩ (to want), ⟨frôr⟩ (to dare), ⟨plir⟩ (to allow), ⟨twāhlör⟩ (to cause), and ⟨fjiimir⟩ (to arrive). Now, these meanings look like they overlap with some of the verb conjugations. And that is completely correct, but they still have uses. The quirks of the auxilliary verbs are detailed below:

Qhar, Sprar, and Plir

These three verbs all mean "can" in English (if you're wondering, *plir* (to allow) means *to be permitted to; may* in the passive). Both ⟨qhar⟩ and ⟨sprar⟩ are covered by the Abilitative mood, which is why it is very rare to actually see these verbs used with the strong verbs (they're really only used for emphasis and poetry); however, the weak verbs do not have Abilitative conjugations, so these two verbs are most often used with weak verbs. The verb ⟨plir⟩ (whose passive form is ⟨plif⟩ (may)) covers permission and is Not covered by the Abilitative mood, which only covers physical and mental ability.

Spir

This verb denotes possibility, much like how the subjunctive mood does; however, the subjunctive mood is only used in subordinate clauses, so anywhere else ⟨spir⟩ is used.

Twāhlör

This weak verb has the same meaning as the causative construction, so what possible use case could this have? This verb is used in supercausative constructions. Take, for example, the strong verb ⟨qgonyör⟩ (to die). Its causative form is ⟨qgohlör⟩ (to kill). Now, how do you say I made him kill it? This is where this verb comes into play. This sentence translated is: ⟨stêp qgohlör tuud stâp twāhlönax⟩ (literally: it to die+CAUS. I him caused).

Fjiimir

This verb only acts as an auxilliary verb when expressing the mediopassive-causative and passive-causative constructions. Let's take the verb ⟨qgohlör⟩ (to kill) again. How would one say "He was killed"? Well, it would be like so: "stâ qgohlör fjiimk" (literally: He to die+CAUS arrived). When arrive is used in any other way, such as in the sentence "*I arrived to cook*", it does not act as an auxilliary verb. Verbal predicates will be explained in a later section.

Qguur

This verb expresses the future construction. It usually does not have an obligatory connotation (e.g. *You shall not pass* is basically *You won't pass* in this language). Its past conjugations form a conditional-type construction. How this verb behaves make it seem more accurate to translate it as *will*, but *shall* is cooler, so I'm listing that as its definition, and you can't stop me. It also makes it clear that it doesn't mean *to will*, as in *to make true by one's own thoughts or desire*.

Why are There Two Infinitives?

In *those times of old*, the infinitives did not exist. The modern infinitive forms derive from those old nominal forms of verbs from *those times of old*, and they can still function as nouns. The present infinitive derives from the old gerund, and stands in for the action itself. The Past infinitive derives from the old resultative noun, indicating the state of having the action done or the state of the finished action (e.g. for the verb *to hit*, the gerund would be *the hitting*, and the resultative noun would translate as *the one that has been hit*). Since *those times of old*, these nouns have come to function as the two infinitives.

The Present Infinitive

As an Infinitive

The present infinitive as an actual verb's use is quite limited. When it's a verb, it's typically only used for citation form and with auxilliary verbs.

As a Gerund

The present infinitive is used much more as a noun than it is a verb. As mentioned before, it is the noun for the action itself (e.g. *swimming* as in *swimming is fun*). When put in the genitive, it can be used as an adjective, equivalent to the present participle in English (in which case it declines as a regular r-stem noun). Let's take, for example, the verb ⟨hnürinyor⟩ (to speak; to talk), which comes from ⟨hnür⟩, from earlier ⟨hnuri⟩; the speaking dog/talking dog would be ⟨hløm hnürinyoriim daagānest⟩ (literally *the dog of talking*; also the Old Minorians had never encountered dogs in Three Dum-Dumz, so I'm using a transliteration of the English word *dog* (daag)). The genitive form can also be used for adjective complements (e.g. *it is Easy to Use*), in which case the adjective will also be in the genitive.

The Past Infinitive

As an Infinitive

The past infinitive is much more common than the present infinitive when it comes to actual verbal uses. The past infinitive is used to denote purpose and verb complements. This use was derived from denoting purpose as "*so that the verb's result would happen*," which was then expanded to be used for all verbal complements.

As a Resultative Noun

The past infinitive can also be used as a resultative noun, roughly translating to *the one that has been affected by the verb*. Like the present infinitive, its genitive form can be used like a participle, equivalent to English's past participle. For example, to translate *the warmed dog/the dog that was warmed*, one could say ⟨hløm önyökriim daagānest⟩ (literally *the dog of the warmed one*). Now this can also be interpreted as *the dog that is in possession of the one that has been warmed*. Context should usually differentiate the two meanings, but one could specify possession by saying *the warmed man's dog* or

by saying *the warm one's dog*, in which case the genitive form of ⟨öny⟩ (literally *of the warm one*), would be used. All the past infinitives of regular verbs decline as r-stems, with the ⟨r⟩ appearing in their non-nominative conjugations.

The Use of the Subjunctive Mood

The subjunctive mood is used Only in Subordinate clauses when they express hypothetical or otherwise unreal situations. To express possibility outside of subordinate clusters, the auxilliary verb ⟨spir⟩ is used as mentioned before. The subjunctive may also be part of the complement phrases of verbs of command (e.g. *I ordered that he eat my desert*). Note that this is Not used as an Optative; that role is primarily filled by the auxilliary verb ⟨sjeor⟩ (to want), although other verbs may also express this meaning,

The Use of the Mediopassive Voice

The mediopassive voice is a reflexive voice. It is used when the subject and the object of the verb are the same. For example, the sentences *It broke (itself)* and *It reddenned itself* would be in the mediopassive voice.

Part IV

Non-Inflectional Grammar

Chapter 7

Main Clauses

Indicative

As described at the beginning of the document, the syntax of this language is almost completely head-final, especially when ordering clauses. In indicative main clauses, the word order is mostly free, with verb-final constructions being preferred; however, in subordinate clauses the word order is fixed to SO(I)V(Aux.). For example, the sentence *I can feed it to him* could be translated as ⟨tuud stêp stăst mushăl qhoist⟩, which is analyzed as *1stPersSing.+Nom. 3rdPersNeutSing.+Acc. 3rdPersMascSing.+Dat. eat+Caus.+Inf. can+1stPersSing+PresImp.*. In main clauses, non-verbs can still fill the final position for emphasis, since the stressed word is always the last word of a prosodic unit.

Interrogative

In interrogative main clauses, the word order becomes Verb-Second. This means that anything can fill the 1st position of the clause (a noun phrase, adverbial phrase, &c.), but the finite verb must come second. If a question has an interrogative word or an adverb, then it must take first position. For example: *Can I feed it to him?* is ⟨tuud plif stêp stăst mushăl?⟩, but *When can I feed it to him?* is ⟨dweeomst plif tuud stêp stăst mushăl?⟩ and *Can I feed him often?* is ⟨fur plif tuud stêp stăst mushăl?⟩.

Chapter 8

Subordinate Clauses

In all subordinate clauses, SO(I)V(Aux.) is the forced word order.

Relative Clauses

Relative clauses Precede the nouns they modify; they also precede all the adjectives that modify the noun and force all determiners to after the noun. Whatever noun is modified by the relative clause must go at the beginning of the clause they are in to avoid center-embedding if the clause is a main clause. The relative pronoun ⟨suul⟩ is used to connect the relative clause to the head noun. For example, both *He that talked to the sun fed the good dog* and *He fed the dog that talked to the sun* have their relative clauses at the beginning in Minorian. And they are translated as ⟨hlafst spaastaa hnurinafk suul stā hlaep lorāp daagānīpst mushaex⟩ and ⟨hlafst spaastaa hnurinafk suul lorāp daagānīpst hlaep stā mushaex⟩, respectively.

Embeded Questions

Embeded questions must precede whatever clause that they're embeded in. They connect to the main clause by an interrogative word placed at the end; other than the interrogative word, the embedded question must be in SO(I)V(Aux.) order. For example, *I know what you ate* would be translated as ⟨qhu mushaenax diip tuud qgāamōstrox⟩, which would be analyzed as *2ndPersSing+Nom eat+Sing+PastPerf what+SingAcc 1stPersSing+Nom know+Sing+PresImp*.

Complementizer Clauses

Complementizer Clauses must precede the main clauses that they are complementing. They attach to the main clause by the use of the complementizer ⟨sūuhl⟩, from earlier ⟨suul hlae⟩. Like all other subordinate clauses, the ordering of a complementizer clause must be in SO(I)V(Aux.) order. For example, *I know that you fed him* would be translated as ⟨qhu stēp mushaex sūuhl tuud qgāamōstrox⟩.

Conditional Statements

Conditional statements are formed in Minorian by putting the conditional clause before the resultative clause. The inflected verb in the conditional clause is always in the subjunctive mood. The conditional clause is connected to the resultative clause by the conjunction ⟨sūus⟩, from earlier ⟨suul hlaez⟩, meaning something along the lines of *with this scenario*. For example, *If I don't eat, I die* would

be translated as ⟨tuud trim mushāfs trim süus, tuud qgonōd⟩, which would be analyzed as *1stPersSing not eat+Subj.+Perf. not if 1stPersSing die+1stPersSing+Ind.+Non-PastPerf.*

Other Subordinate Clauses

To form other subordinate clauses, subordinating conjunctions must be used. Most subordinating conjunctions are correlative conjunctions, although others exist. Since these conjunctions function as adverbs, they come at the beginning of their respective clauses. Here is a table of the most common ones.

English	Minorian
Where X, Y	<i>hleos</i>
Whence X, Y	<i>hlaw</i>
Whither X, Y	<i>hleox</i>
When X, Y	<i>hleeomt</i>
Although X, Y	<i>hluul</i>
As/after/since X, Y	<i>hlāa</i>
The more X, the more Y	<i>hlaed</i>
Because X, Y	<i>hlaes</i>

For example, to say *Because I didn't eat, I died*, one would say in Minorian: ⟨hlaes tuud trim mushaenax trim, hlaes tuud qgonāfk⟩.

Chapter 9

Potpurri

Postpositions

Postpositions follow their nouns. If a complementizer phrase is the argument of an postposition, both the phrase and the complementizer must precede the postposition; the same thing applies for relative clauses.

Negation

Negation for verbs and other parts of speech is different. To negate verbs, one uses the particle ⟨trim⟩ immediately before and after the verb. To negate other parts of speech, one uses the number ⟨träamjä⟩.

Adverbs

As mentioned at the beginning of the document, all adverbs must precede the verb (with the exception of ⟨trim⟩). Any adjective-derived adverb had to be in an adverbial phrase that was immediately before the verb it modifies, but adverbs not derived from adjectives are free in position.

Verbal Complements and the Arguments of Transitive Verbs Used with Auxiliaries

If a transitive verb appears as the complement of another verb (i.e. it appears as an infinitive), then the non-finite clause will precede the finite clause. For example, *I made him kill it* is translated as ⟨stêp qgohlör tuud stâp twâhlönax⟩, with ⟨stêp qgohlör⟩ (to kill it) preceding the finite clause.

Serialization of Verbs and Uses of Coordinating Conjunctions

There are two coordinating conjunctions in Minorian: ⟨xet⟩ (and) and ⟨wix⟩ (or). *And* isn't used as extensively as they are in English. It is only used to conjoin clauses. It does not create compound subjects or verbs. Compound verbs are created by serializing multiple inflected verbs in the same clause.

Copular Predicates and the Verb Ôpãar

Clauses that use the verbs ⟨pãar⟩ (to be) or ⟨Ôpãar⟩ (to become) are strictly OVS, since the OV sections are tread as adjectives. Also, both the subjects and objects of these verbs are in the Nominative, which is why the strict word order is enforced.
